

## Measurements Required for Proper Sized Wrap

Cretex Specialty Products stocks wraps for manholes with standard wall thicknesses. We do not stock wraps for non-standard sizes or for pipe applications.

### For Manholes:

1. Determine the manhole I.D. and if it is a standard wall thickness
2. If wall thickness is not standard, we must have the I.D. of the manhole and the wall thickness or the O.D. of the manhole structure.
3. Also note any special needs such as width or with and without tensioning ratchets.

### For Pipe:

1. Is the pipe circular, elliptical, arch, box or other?
2. What type of joint is it, flush or bell and spigot?
3. What is the I.D. of the pipe?
  - a. If other than circular, we need additional measurements or shop drawings from the precastor or pipe manufacturer
4. What is the wall thickness or O.D. of the pipe?
5. If bell and spigot joint, what is the O.D. of the pipe bell?
