

ShuvlNose® Adaptor

The **ShuvlNose® Adaptor** is used to establish a reliable connection between pipes with **similar inside diameters and widely different outside diameters**.

1

Apply lubricant to the inner surface contact area of the larger pipe.

2

Ensuring the wedge is in line with the top of the pipe, insert the ShuvlNose® Adaptor gasket into the larger pipe up to the pipe stop.

3

Using a hammer and 2 x 4 wood, pound in the wedge until the collar is fully expanded.

4

Using a metal cutting tool, cut the wedge flush with the gasket and steel collar. Clean the cylinder, ensuring no steel particles remain inside.

5

**MAXADAPTOR®
Coupling**

Tighten both sides of the MAXADAPTOR® Coupling, alternating back and forth.

6

When the coupling ID's are closely matched to the pipe/adaptor OD's, install the MAXADAPTOR® Coupling onto the ShuvlNose® Adaptor. Take up all slack in coupling with a cordless drill or socket wrench.

ShuvlNose® Adaptor

7

Insert the smaller pipe into the MAXADAPTOR® Coupling and take up all slack in coupling with a cordless drill or socket wrench. Complete the installation by tightening the tension clamp, alternating back and forth, to 80 in/lbs. minimum torque.
